

**Sample Student Activity Grade 3**

Name \_\_\_\_\_

### Hop to It!

Remember:  
1 meter = 100 centimeters.

Friendly mascots give students helpful reminders related to the activity.

#### Try This

- Mark a line on the ground. Put your toes on the line.
- Try to jump exactly 1 meter.
- Have your partner mark where you land.
- Measure the distance you jumped in centimeters. Record.
- Complete the chart.

Clear, sequential directions for each hands-on activity make it easy for students to move from one task to the next.

Distance I jumped	More or less than 1 meter?	How many centimeters away from a meter?
① _____ cm	more    less	_____ cm
② _____ cm	more    less	_____ cm
③ _____ cm	more    less	_____ cm
④ _____ cm	more    less	_____ cm

Students work in pairs, small groups, or individually to measure, record, and discuss their findings.

Put a star next to the jump(s) that were closest to 1 meter.

Many lessons include challenge activities or reflective questions that help students to analyze the concepts from the lesson.
